

GLOVE CARE GUIDE

PROPER CARE FOR BETTER PROTECTION

POLYESTER KNITTED GLOVES

(ถุงมือถักโพลีเอสเตอร์)

Washing Instructions

- Hand wash or machine wash on a gentle cycle at a maximum temperature of 40°C.
- Use a mild, pH-neutral detergent.
- Wash separately from colored fabrics, lint-producing materials, sharp objects, and abrasive items.
- Do not use bleach, chlorine, fabric softener, solvents, or harsh detergents.
- Do not soak for long periods or scrub with a stiff brush, as this may deform the knitted structure or cause pilling.
- Rinse thoroughly to remove all detergent residue.
- Gently squeeze out excess water. Do not wring.

Drying Instructions

- Reshape and air-dry in a shaded, well-ventilated area.
- Lay flat or hang carefully to prevent stretching.
- Avoid tumble-drying, ironing, hot air, direct sunlight, open flames, and direct heat.
- Dry completely before use or storage to prevent moisture, odors, and mold.
- Store in a clean, dry area away from dust, oil, and chemicals.

Inspect the gloves after washing and before each use. Replace them if you find holes, tears, loose seams, frayed fibers, stretching, or deformation.

Note: Uncoated 100% polyester gloves are suitable for general handling and clean work. They should not be described as cut-resistant unless tested and certified to a relevant standard, such as EN 388.
